Geraldine (Geri) Richmond

Geraldine (Geri) Richmond is the Presidential Chair in Science and Professor of Chemistry at the University of Oregon. Her research using laser spectroscopy and computational methods focusses on understanding environmentally and technologically important processes that occur at water, semiconductor and mineral surfaces. The studies have relevance to current issues in energy production, environmental remediation and atmospheric chemistry. Over 200 publications have resulted from the studies conducted in her laboratory with undergraduate, graduate students and postdoctoral associates. Her teaching activities in the classroom and beyond focus on

science literacy, science policy and building a strong and diverse science and engineering workforce in the U.S. and globally. Throughout her career she has been actively involved in efforts to increase the number and success of women in science and engineering. Richmond received her B.S. in Chemistry from Kansas State University and her Ph.D. in Physical Chemistry from the University of California, Berkeley.

Richmond is a member of the National Academy of Sciences, the American Academy of Arts and Sciences and is a Fellow of the American Chemical Society (ACS), the American Physical Society (APS), the Association for the Advancement of Science (AAAS) and the Association for Women in Science. She has served in leadership roles on many international, national and state governing and advisory boards. Richmond recently finished her term as President of AAAS, the largest general scientific professional organization in the world and is currently the Chair of the Board of AAAS. She is also currently serving as a member of the National Science Board (President Obama appointee) and the U.S. Science Envoy to the Lower Mekong River Countries of Vietnam, Laos, Cambodia, Burma and Thailand (Secretary Kerry appointee). She is the founding and current director of COACh (http://coach.uoregon.edu), a grass-roots organization formed in 1998 that has helped in the career advancement of thousands of scientists and engineers in the U.S., Asia, Africa and Latin America.

Awards for her scientific accomplishments include the National Medal of Science from President Obama, the American Chemical Society (ACS) Olin-Garvan Medal, the ACS Joel H. Hildebrand Award, and the American Physical Society Davisson-Germer Prize. Awards for these education, outreach and science capacity building efforts include the Presidential Award for Excellence in Science, Mathematics and Engineering Mentoring, the ACS Award for Encouraging Women in the Chemical Sciences and the ACS Charles L. Parsons Award.
